

SYSTEM FOR NORMALIZING A DISCOURSE REPRESENTATION STRUCTURE AND NORMALIZED DATA STRUCTURE

5

ABSTRACT OF THE DISCLOSURE

10 The present invention is a system and method for normalizing a discourse representation structure (DRS). The elements of the structure are rewritten and sorted in a way such that structures which may appear different but are nonetheless equivalent can be associated with the same, normalized representation. The present invention can also include a data structure for a DRS. The DRS is represented by an array of boxes, each having a set
15 of elements which in turn has a predefined structure suitable for representing a wide variety of linguistic information.
